(57) **ABSTRACT**

A communication apparatus that is capable of switching to an external caller apparatus if a ringing signal from the external caller apparatus is received during a telephone communication with another external apparatus. The communication apparatus has a handset and a display panel provided in the handset. A caller information display control device causes caller information regarding the external caller apparatus to be displayed on the display panel if a ringing signal is received from the external caller apparatus during a telephone conversation with the other external apparatus. The communication apparatus further includes an input/output level control device that changes the input and output levels of the handset if the caller information is displayed on the display panel during the telephone conversation.
